ECOC 2012, paper Tu3F5.

We report what we believe to be the first experimentally study of inter-modal cross-gain modulation and associated transient effects as different spatial modes and wavelength channels are added and dropped within a two-mode amplifier for SDM transmission.

Modal Gain Control in a Multimode Erbium Doped Fiber Amplifier Incorporating Ring Doping

Qiongyue Kang, Eeleong Lim, Yongmin Jung, Jayanta Sahu, Francesco Poletti, Shaif-ul Alam, David ECOC 2012, paper P1.05

We theoretically demonstrate the performance of a step index multimode (two mode-group) erbium-doped fiber amplifier with a localized erbium doped ring distribution for Space Division Multiplexed (SDM) transmission.

Modal Gain Equalization in a Few Moded Erbium-Doped Fiber Amplifier

S.-U. Alam, Y. Jung, Z. Li, A. Dhar, J. K. Sahu, F. Poletti and D. J. Richardson

SUM 2012 IEEE Photonics Society Summer Topical Meeting on Space Division Multiplexing for Optical Systems and Networks, paper WC2.1 (Invited)

We present results on broadband gain equalisation in a MM-EDFA for SDM transmission obtained by optimization of the pump launch and careful tailoring of both the fiber refractive index profile and erbium ion distribution.

Accurate modal gain control in a multimode erbium doped fiber amplifier incorporating ring doping and a simple LP01 pump configuration

Qiongyue Kang, Ee-Leong Lim, Yongmin Jung, Jayanta K. Sahu, Francesco Poletti, Catherine Baskiotis, Shaif-ul Alam, and David J. Richardson

Optics Express, Vol. 20, Issue 19, pp. 20835-20843 (2012)

We experimentally validate a numerical model to study multimode erbium-doped fiber amplifiers (MM-EDFAs). Using this model, we demonstrate the improved performance achievable in a step index MM-EDFA incorporating a localized erbium doped ring and its potential for Space Division Multiplexed (SDM) transmission. Using a pure LP01 pump beam, which greatly simplifies amplifier construction, accurate modal gain control can be achieved by carefully tuning the thickness of the ring-doped layer in the active fiber and the pump power. In particular, by optimizing the erbium-ring-doped structure and the length of active fiber used, over 20dB gain for both LP01 and LP11 signals with a maximum gain difference of around 2 dB across the C band are predicted for a pure LP01 pump beam delivering 250mW power at 980nm.

Detailed study of modal gain in a multimode EDFA supporting LP01 and LP11 mode group amplification

Y.Jung, S.-U.Alam, Z.Li, A.Dhar, D.Giles, I.Giles, J.K.Sahu, F.Poletti, D.J.Richardson,

OFC 2012, paper OM3C.4

We demonstrate simultaneous modal gains of ~20dB for different pair-wise combinations of spatial and polarization modes in a MM-EDFA. The differential modal gains are reduced by fiber design and control of the pump field distribution.
